The President's Malaria Initiative – Mekong Cross-Border Activities
January 2013

In Burma’s border-zone hotspots, one of CAP-Malaria’s activities combines raising malaria awareness with bed net distribution, to ensure better net usage. The picture below shows the January net distribution activity in Bokpyin Township, in the Tanintharyi Region. The intended audiences were given the long lasting insecticide treated bed nets with messaging on how the disease is transmitted and prevented, and how to access treatment services.
